### **Plant Feature: Caryota**

Bring bold, tropical drama to any space with **Caryota**, commonly known as the **Fishtail Palm**. This striking, architectural palm delivers uniquely textured foliage and an instantly exotic presence—perfect for interiors that call for something sculptural and unforgettable.

#### Why you'll love it:

-  **Unmistakable Tropical Architecture:** With its jagged, “fishtail”-shaped leaflets and gracefully arching fronds, Caryota adds instant visual impact. Younger plants (especially in 5 gallons) have a wonderfully **full, leafy figure**, while more mature plants develop taller, stretching trunks that naturally form an elegant **umbrella-like canopy**. This shift from fullness to height creates a dramatic, layered look over time.
-  **Impressive Indoor Performance:** Though naturally a canopy palm, Caryota adapts surprisingly well to bright indoor environments. When given consistent moisture and strong filtered light, it remains lush, full, and visually stunning. Ideal for homes, offices, lobbies, and hospitality spaces seeking a statement plant with undeniable character.
-  **Strong root system:** Caryota has an **extremely strong root system**—strong enough to **break pots** if confined too long. For best results, **up-pot early** when roots fill the container. In larger decorative planters, it maintains a commanding vertical silhouette, gradually developing multiple stems for a fuller, layered look.
-  **Light loving:** Thrives in **bright, indirect to filtered light**. Can handle some early-morning or late-afternoon sun indoors. Not suited for low light as insufficient light leads to sparse growth and stretching.
-  **A thirsty palm:** Caryota **drinks water quickly** and should **not be allowed to fully dry out**. Water thoroughly, allow it to drain, and water again when the top of the soil feels dry to the touch. Avoid overwatering—this palm wants **consistent moisture**, not soginess. Performs well in large containers and controlled-watering systems.
-  **Year-Round Statement Appeal:**  
A fast-to-moderate grower that stays lush and emerald green with regular care. Simply remove aging fronds at the base to maintain an elegant silhouette.
-  **Versatile Styling:** A natural focal point in large containers, or pair it with low-growing, moisture-loving tropicals for a layered rainforest look. Its sculptural leaves make it equally at home in modern, contemporary, or resort-inspired interiors.
-  **Size:** We offer Caryota in **3 gallon, 5 gallon, and 7 gallon** sizes, ranging from **3–5 ft juveniles** to **8–10 ft interior specimens**. Indoors, Caryota typically grows **8–12 ft**, developing new multi-stemmed clusters over time for a full, dramatic profile.

**Additional Names:** Caryota (Fishtail Palm, Toddy Palm, Wine Palm)

**Perfect for:**

Large residential living areas, open office spaces, luxury hospitality environments, and any interior that benefits from a bold, sculptural tropical feature. Add texture, height, and a sense of exotic lushness with the unforgettable Caryota.

**Additional Information:**

Caryota, known collectively as **Fishtail Palms**, are admired for their distinctive, triangular leaflets that resemble the tail of a fish—one of the most unique foliage profiles in the palm world. Their multi-stemmed, clumping growth creates a dense, vertical structure, making them excellent natural room dividers or bold architectural accents.

Native to tropical Asia and the Indo-Pacific region, Caryotas grow in humid forest environments with bright, filtered light and evenly moist soil—conditions that translate well to bright indoor locations. Indoors, they typically remain more compact than their outdoor counterparts and maintain a lush, layered crown when watered consistently and kept out of harsh direct sun.

While Caryotas are dramatic and fast-growing, they do appreciate attentive watering and benefit from high humidity and excellent drainage. Their unique leaf structure makes them especially eye-catching in contemporary plant design, where texture and form are key.

Fun fact, Hawaii growers can ship Caryota into California, but Florida growers cannot. We are proud to grow and ship these high-quality palms that began their journey in Hawaii's ideal tropical climate.

**Grower's tip:**

Caryotas dislike drying out completely—keep soil **evenly moist but never soggy**. In lower light or cooler seasons, reduce watering frequency. Brown tips can indicate underwatering, low humidity, or mineral sensitivity; using filtered water and boosting humidity can keep the foliage pristine. Provide bright, indirect light for the densest growth and richest leaf color.

**Pairs well with:**

Pothos, philodendron, peace lily, dieffenbachia, fern varieties, and other humidity-loving tropicals that stay lower to the ground and complement the palm's vertical form.

**Key characteristics:**

Attribute	Profile
Light	 Medium-High
Water	 High
Pest Resistance	 Medium
Growth Habit	 Large 7ft+
Popularity	 High
